

reserved

:controller, :action, :id, :format
:param (format) set default
PATH OUT (default) set default params

match is the main method!
It has 13 options

:via
"match" http verb

:path
match path

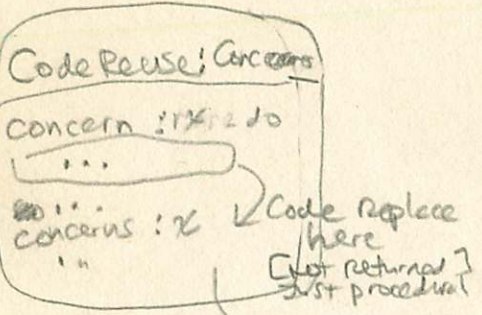

:constraints
regex filter
any * or !
are sent to params

:to

Rack App eg lambda { |env| [200, {}, ["Hi"]] }

:module :controller :action
prefix controller

for blocks limit scope to [:member, :collection, :new]

:anchor => true
"be exact"
false => matches are a prefix

:as helper to identify the thing

① Gotcha: regex matches length! use :anchor => false

RESOURCES | RESTful

Basics
resources : create 8 path } both use plus!
resource : creates 6 paths } controller names

Nesting "DEFAULT SETTER"

Scope : gives u the most options, prefix path only to start
namespace : a convenience command, prefix path, helper, & controller

shallow : limit nesting to [index, new, create]

Add to resources : { on: collection -> add to end of index path
on: member -> add to end of :id
on: new -> add to end of new
